

Voxessor Manual

Voxessor is a sophisticated tool that will help you to create a perfect voice-over within a few seconds. This easy manual explains its features and controls' functions.

Main section

Input Control - Input control is basically Gain in. Controls how much signal is going in Voxessor plugin. Range is from -24 to +24dB

Output Control - This knob controls the output volume of the whole plugin. Set between -24 and +24 dB.

Autolevel - Leveling of signal to have fewer dynamics. Turning this feature on will result in a constant volume of your material.

Mode – Choose the character of the recorded voice and Voxessor will automatically EQ it. The scale goes from the deepest and most manly voices to gentle female speech.

Intensity - Intensity is a dry/wet knob for the EQ applied in this section.

Dynamics and De-Esser

Compressor – Determines the level of compression applied to your signal

Gate - Level of gate applied to your signal

De-esser on/off – This button determines whether de-esser is applied to your signal.

Depth - Level of intensity of De-esser

Deesser tuning – This knob is used to sweep-search for the frequency of the speaker's sibilants. That will be used for de-essing.

Intelligent Matching

On/Off – Turns on the matching process.

Analyze your voice – Turn this feature on for 5 seconds (button glows) when your recorded signal is playing, then switch off! Your signal is analyzed then and ready to be matched to ideal. Correctness also depends on "Mode" (character) voice you have chosen.

Match – This knob is a dry/wet knob for the matching feature.

Note that on OS X since High Sierra you may need to restart your computer to make your DAW find new plugins.

Trial and activation

Voxessor is initially in demo mode, which lets you evaluate the plugin. Try it in your mixing/mastering sessions and make sure it really does the trick. When ready, purchase a licence from our shop or any of our resellers. You will receive a so-called licence file, which you download to your computer. The plugin displays an ACTIVATE button when in trial mode. Click it and select the licence file. The plugin will check the licence and activate the licence on your computer. After you restart your DAW, the plugin will be activated and will work indefinitely without restrictions. You can use the plugin on all your computers.
